# INFLATE

---

Attach boom to end caps before inflating. Open neoprene valve cover and unscrew inflation valve cap. Attach pump hose (sold separately) onto inflation valve and pump to indicated PSI. Squeeze one-pump clip to separate leading edge and strut bladders.

# ATTACHMENT

---

If your nose attachment does not have a knot, slide extension through nose loop. Then slide one end of rope extension through the other.

If using a wing that is 4.5m or larger, you will need to use the leash with wrist cuff and the 30cm extension. If using a wing that is smaller than 4.5m attach leash with wrist cuff directly to nose attachment.

If your nose attachment has a knot, create a Lark's head knot on one end of the pigtail and slide over the nose attachment.

Slide leash loop through free end of the rope extension and then slide wrist cuff through loop.

# BOOM SETUP

---

## SMALL WING SETUP

**SIZES** | 2.5 - 3.0 - 3.5 - 4.0

Use only the main section, no extension needed.

## LARGER WING SETUP

**SIZES** | 4.5 - 5.0 - 5.5 - 6.5 - 7.5

Use the main section and  
the 500mm extension.

# TENSION WEBBING SETUP

---

## A. CENTER WEBBING CONNECTION

1. Loop the center webbing around the boom and connect the g-hook to the strut.

## B. REGULAR WIND SETTING

In light to regular wind, set the center webbing with a slight tension.

## C. OVERPOWERED SETTING

In overpowered / windy conditions, increasing the tension on the center webbing will flatten the profile and increase the wing's high wind performance.

# CONTROL

---

Use Boom to power the wing and control wingtip roll.

# DEFLATE AND STORE

---

Unclip the one-pump valve, open the strut deflate valve and unscrew the inflate valve to deflate. Once deflated, remove boom from end caps by depressing pins. While inflated remember to weigh it down or teather it to keep it from flying away.

While not in use, make sure it's dry before packing. Use the storage bag and keep it in a cool, dry place.\*\*  
DO NOT LEAVE WING EXPOSED TO DIRECT SUN-LIGHT OR HEAT WHEN NOT IN USE
