

SLINGSHOT

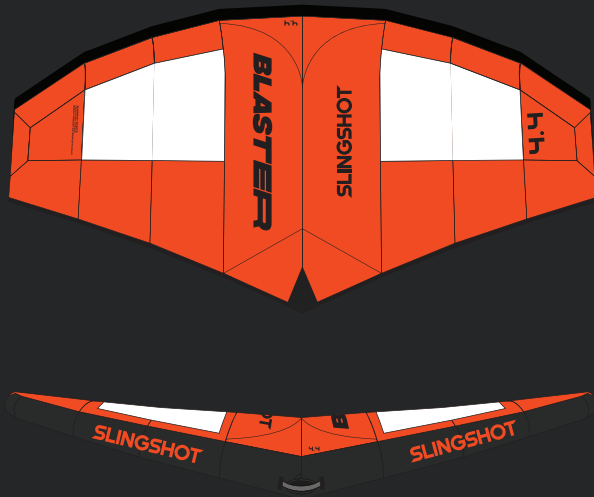

BLASTER V1

QUICK START GUIDE

BLASTER V1

The new Blaster wing from Slingshot brings handheld wing power to the masses with its simple, user-friendly design at an unbeatable price. Whether you use your wing with skates, skis, or on the water the Blaster is quick to setup and incredibly intuitive to use. It's 4.4 square meter size is perfect for all rider weights and covers the largest range of wind conditions.

BLASTER V1

FEATURES

Riders of all sizes will enjoy the Blaster's compact design that makes turns and transitions effortless. Use the included pump for quick inflation and off you go, using the 3 perfectly placed handles to power the wing. The clear vinyl windows allow you to see through the wing providing a clear field of view downwind. Jump into the exciting new sport of winging with the Slingshot Blaster.

USING YOUR **BLASTER V1**

1. INFLATE

Open neoprene valve cover and unscrew inflation valve cap. Attach pump hose (sold separately) onto inflation valve and pump to indicated PSI. Squeeze one-pump clip to separate leading edge and strut bladders.

2. ATTACH

Feed the wrist loop through the wing loop on the leading edge and pull wrist loop through itself to complete the connection. Once inflated remember to weigh down the wing or teather it to keep it from flying away.

USING YOUR **BLASTER V1**

3. CONTROL

Use strut handles to power the wing and control wingtip roll.

4. DEFLATE AND STORE

Unclip the one-pump valve and unscrew the inflate valve to deflate. When packing the wing take care not to fold the vinyl window panels to ensure long lasting performance.

Make sure the wing is dry before packing. Use the storage bag and keep it in a cool, dry place.

****DO NOT LEAVE BLASTER EXPOSED TO DIRECT SUNLIGHT OR HEAT WHEN NOT IN USE.**
